

HOW TO CREATE A HEALTHY BREATHING ENVIRONMENT AT HOME

Those aren't clouds, that's smog.

The epidemic of air pollution has been causing detrimental impacts on our health. These effects include but are not limited to:

1. Allergies
2. Asthma
3. Lung Cancer
4. Heart Disease
5. Strokes

Air pollution stems from four major sources: mobile sources, stationary sources, area sources and natural air sources. Whether it be cars, power plants, location, or natural disasters such as a volcano rupture, there is no escaping air pollution once you step outside! We are constantly interacting and breathing in air pollution whether we like it or not.

You may want to hide away in your home where the air is cleaner? Unfortunately, your air at home is actually worse than the air outside. The reason for this is that the air outside is organic, meaning that it can produce energy to create hydroxyl radicals to combat pollutants. Whereas the air indoors struggles to do so because it loses energy in air that naturally creates a balance between pollutants and hydroxyl radicals.

REMEDY: NATURALIZE YOUR AIR AT HOME!

Although the air we breath at home may be questionable, it can be in one's best interest to naturalize indoor air. This would allow the same process air goes through outside where it energizes and cleans the air to convert it from polluted to healthy.

Since we spend the majority of our lives indoors, the impact of having an at *home air neutralizer* can dramatically increase the quality of health in our lives. While purifying the air, it can control odors and germs where we eat and sleep. Additionally, it helps reduce the occurrence of problems such as mold and must growing in bathroom spaces.

You can purchase your own at home air purifier, *AirRestore™ Air Naturalizer Tempest*, which has the benefits of purifying and energizing the air your breath at home. It is more effective than a typical product because it covers more basis in the living quarter of up to 800 square feet and lasts longer and is 16 times more effective than competitors.

COST BENEFITS

The cost of purchasing an air neutralizer will be worth it because it can decrease the exposure of pollutants in the air. Thus, decrease the chances of health problems and medical costs.
