

# KEEPING YOUR CAR FRESH AND CLEAN

In the summer, our cars are sitting out in the heat. The worst thing is to step into your car and wait with door/windows wide open to air it out. It takes up valuable time doing this and despite airing it out, there is a lingering smell left behind. Car scents are a temporary fix that only covers up the problem.

The high temperatures makes the car's air to be hot and stale which causes it to be uncomfortable and difficult to breathe in. Poor air circulation will allow for bacteria and other chemicals to sit and build up in your car that can create an unhealthy breathing environment. These toxins can irritate us and cause difficulties breathing for those who already have sensitivity such as those with asthma. And for those who do not suffer from breathing conditions are still impacted by dry skin, headaches, and fatigue.

It can be especially harmful for those who are in their car for long commutes or road trips. While air conditioning and car scents around appealing at first, they do not help circulate the air outside the car enough to keep bacteria and other toxins from growing and affecting our bodies. It does not fix the problem but merely puts a temporary band aid over it. For cars with no air conditioning, they have to rely on outside air to hopefully cool them down. And while it can make their car breathable again, it can take a while.

The best solution would be to get a device that can process air circulation in cars and remove bacteria and toxins to prevent harm to us. Our cars tend to be the last of our possessions to receive deep cleaning it deserves which increases the risk of bacteria to sit and grow and circulate in the air we breathe. For many it is not realistically possible to continuously clean our cars with busy schedules but with air purifiers, it can relieve the impacts of bacteria and with little to no effort.

## WHAT EXACTLY CAN HELP?

Fortunately, there is a solution. The **pureAir Motion** is a revolutionary tool that can be accessible for all car types because it conveniently fits in a cup holder. It is a small compact air purifier designed to keep small spaces, such as a car, to keep the breathing spaces fresh and clean.

“MOTION USES AN EFFECTIVE CLUSTER ION TECHNOLOGY TO REMOVE PARTICULATE AND ODORS FROM YOUR BREATHING SPACE AND REDUCE BACTERIA AND VIRUSES.”

The real question is, what does it not do? All the features include:

- Ozone-Free Cluster Ion Technology
- Removes Smoke & Odors
- Reduces Bacteria & Viruses
- Convenient Design for Cupholder Placement
- Choose Between Three Great Finishes
- Color options
  - Champagne
  - Black Pearl
  - Rubberized

Considering all the benefits to your health, as well as how people react when they step inside your car makes it all worth it. The worst thing we can do to ourselves is to hold back from helping our bodies flourish when there are tools available to do so.
