

Technology to Protect your Water Quality

With everything going on in our lives, its easy to forget to check on the current status of our plumbing and hard water build up. Hard water is high mineral content that include calcium and magnesium. While these minerals may sound harmless. The continuous consumption of hard water can cause health problems long term. Studies have shown that hard water is linked to cardiovascular diseases. In the U.S, high blood pressure and heart disease is a prevalent problem that studies have shown to be the result of hard water. Health concerns like these have been a long standing issue and it is best to take as much precaution as possible to prevent medical problems from occurring.

Yet some of us do not realize that we have hard water. If it's a problem that stems from poor plumbing, then the first reaction would be to check them. It can be costly to request a plumber to come down and figure out the exact problem and find a resolution which may result in invasive procedures. At the end of the day, the problem may not be resolved.

The best solution would be to use a tool that can help regulate water to have soft water to reduce the amount of minerals. In addition, a device that also has scale prevention would be useful so there will not be a problem to treat.

The perfect device to use would be the **pureWater Hard Water Genie**. This can help keep the water in your house clean and fresh with its computerized water conditioner. The features include:

- Conditions Water Supply
- Prevents & Removes Scale Buildup
- Protects Appliances

No one enjoys the slime build up in their pipes. This device can help stop slime with the salt free water conditioner that keeps plumbing clean so families can enjoy a nice glass of water, especially in the heat. Not only does it have better taste but clothes and appliances will be better too. And unlike other similar devices, it includes a lifetime warranty and money saving from potential plumbing costs.

You can see results within the first month! Customers have testified to noticing a significant difference in their water quality in just a short amount of time.

There may not be any warning signs or concerns with your water but with this tool you can give you more reassurance that the water is safe and healthy for you and your family to use.

These are the important investments for you and your family's health and wellness. And of course, an excellent investment for money saving.
